

A Beautiful Surface

Spray Granite Advantage

COLORS FOR SWIMMING POOLS & SPAS

# Spray Granite Advantage

## COLORS FOR SWIMMING POOLS & SPAS

### **Spray Granite Advantage is a beautiful and economical option for pool and spa surfaces.**

The technology behind our spray granite materials (SGP) is superior in chemistry and design, resulting in unsurpassed quality and long term durability. SGP products have an engineered particle size distribution, with the focus on building opacity in the thinnest layer practical to yield the best economics. The thermoset granules used in our SGP products are made with NPG-ISO (Neopentyl Glycol and Isophthalic Acid) resin. NPG-ISO resins yield a high heat distortion temperature, chemical resistance, and resistance to water permeation. Spray Granite Advantage is also flame retardant, chemical and stain resistant, heat resistant and UV stable. SGP products will make a durable and aesthetically pleasing granite effect surface. The performance of a SGP part is also dependant on the resin or gel coat that you use. For the best physical properties use a 100% NPG-ISO product.

**o Many of the colors in the SGP line contain a reflective particle for more shimmer.**

Color samples shown here are representative and may vary slightly. Appearance can be altered with a change in catalyzation, backfill pigmentation and surface treatment. Final product determination must be based on spraying in your process.

- Outstanding coverage
- Less shrinkage than thermoplastic granule products
- Excellent bonding with quality gel coat systems
- Superior hardness and stain resistance
- The ability to mix only what you need when you need it
- Cost savings when compared to other ready-to-spray products
- Shipped as a non-hazardous, non-flammable material
- Will last indefinitely if properly stored
- Custom colors and color matching available

Maui Blue

Blue Surf  
SGP 735

Hawaiian Ocean  
SGP 741

Deep Water  
SGP 760

Stone  
SGP 260

Volcano  
SGP 265

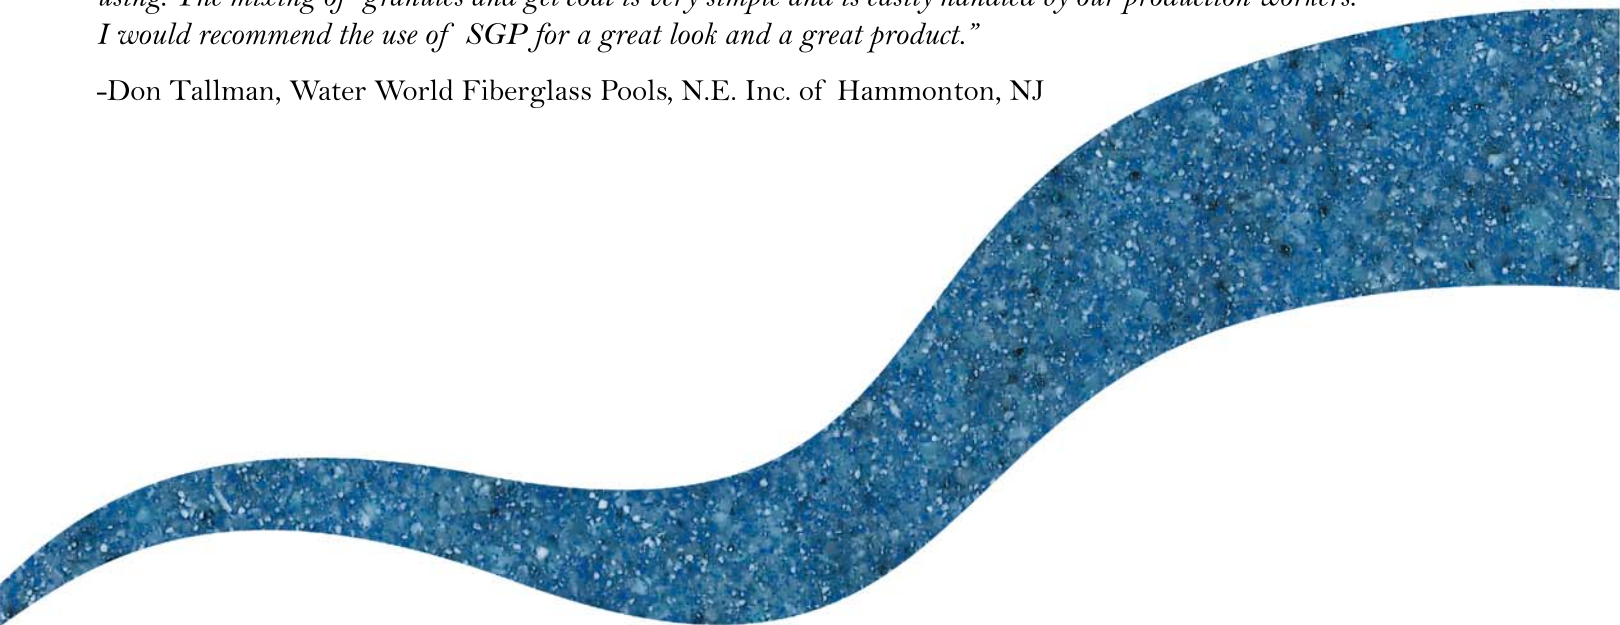

**The surface finish will have an impact on the overall appearance and ambiance of the pool or spa**

The color of the surface finish will affect the water's color appearance and give it various reflective qualities. Using Spray Granite Advantage will provide water color options such as deep blues to sky blues or teals. A patterned finish also helps mask debris and gives it a high quality appearance.

*"We are currently using The R.J. Marshall Company's Spray Granite Advantage along with HK Research's HD Clear gel coat. I am very pleased with the results we achieve on our pools with this material. The pools we produce using this system have a more clean and defined look than the previous spray granite we had been using. The mixing of granules and gel coat is very simple and is easily handled by our production workers. I would recommend the use of SGP for a great look and a great product."*
