# West Coast Stocking Program

***The R.J. Marshall Company has added 9 colors/textures to inventory at our Valley Springs, California location.***

Stone Fill (SFL) & The New Stone Fill HD (SFHD) granite effect materials are designed for casting behind clear gel coat. Stone Fill HD offers a translucent, large aggregate appearance without the gel coat orange peel. Stone Fill HD adds another unique option for marble manufacturers that compliments the already popular Stone Fill line.

The Densified Granite Effect Series (DGE) and Luxury Granite Series (LXS) was developed to supply you, the cultured marble and solid surface artisan, with the most striking and up-to-date granite effect patterns available on the market. Since our original twelve-color product launch in 1991, the R.J. Marshall Company has responded to your requests for a wider range of colors, patterns and textures with dedication and innovation. Keeping pace with current design trends and staying at the forefront of technical research, we have created blends to help make you successful in a competitive marketplace.

Spray Granite Advantage filler system is an economical alternative to solid surface and cultured granite castings. It is designed to be mixed into a clear gelcoat and sprayed behind a clear gelcoat or against the mold as the primary wear surface. Spray Granite Advantage can be used in cast polymer and fiberglass reinforced plastic products. It is made from the highest UV stable thermoset polyester resin and ATH fillers available.
