

Spa Jet Face Cap Sets

Spa Jets deliver a higher water flow than ordinary whirlpool jets. Since they are adjustable, the water can be directed to a specific location. The water volume can also be adjusted by simply twisting the nozzle. You can add separate air flow controls or pneumatic on/off switches to create separate back or foot controls for ultimate versatility in a whirlpool bath. These jets offer a different look compared to traditional white-on-

white whirlpool jets, as well as unique functional capability not found in traditional whirlpool baths. Combine these with other options such as Mini Jets and Whirly Jets on large tubs, such as the **Mark 26** or **Mark 43**, and the result is the ultimate in relaxation! You can also add 2 Spa Jet assemblies to a 6 jet system to make a appealing, simple upgrade.

NOTICE: Unless otherwise specified below, Spa Jet Cap Sets include the specified quantity of Jet Face Caps, plus Pneumatic On/Off Switch Cover, our standard Silent Air Flow Control Cap and Suction Cover.
