Roll	Roll
Pal	Pallet (per)
Pk	Pack
Pr	Pair
St	Set

Color Pigments

Brocom Standard Pigments

Marshall Gruber offers high quality Brocom Designer Marble color pigments, specifically designed for use with cultured marble and solid surface applications.

- Engineered specifically for cultured marble and solid surface
- Formulated so they can be stored almost indefinitely
- Custom color matching is available at no charge.
- Ready to use - no formulating or adjusting
- Produced without toxic pigments such as lead and cadmium
- Packaged in standard 5 lb sizes. Call for other sizes or colors.

Note: Part numbers will start with one of the two following values. Note the application of each is different, so determine your application and order the appropriate formulation.

ATH = Aluminum Tri-Hydrate (for Solid Surface)

A = Calcium Carbonate based (for Cultured Marble)

Permanent Hats

These hats become a permanent part of the marble product, providing a finished underside which requires little or no additional finishing. To select the proper permanent hat, find your bowl in the first column, then select the appropriate permanent hat. Hats are grouped by white or clear plastic, then by "With Overflow", or with "No Overflow".

Note: Hats in the following Permanent Hat Chart that are bolded and asterisked are the IL order numbers. These hats are superior compared to the older original hats, and are less expensive. We recommend you order the IL hats. If you prefer to order the original hats (at a higher price), use the number shown, but remove the IL designation from the number.

New White and Clear "IL" Hats

Reusable Polyethylene Funnels

Available in Round, Oval and Square funnel pour holes.

Fits Marshall Gruber Permanent and Reusable Hats.

These Reusable Funnels are used in conjunction with Marshall Gruber Permanent and/or Reusable Hats to reduce spillage and wastage of cultured marble matrix during filling of the mold. Manufactured of high quality polyethylene, these hats can be used multiple times and clean up by flexing the material. Order the version with the hole opening that matches your permanent or reusable hat.

Note: Lead times of 1-4 weeks may apply.
Call for more information.

Order Information:

Round - Ea - #02082

Oval - Ea - #02083

Square (5" x 5") - Ea - #02084

Shown is the oval funnel (#02082) mounted on a Reusable Hat (with oval opening).

Polyethylene (Rigid Plastic) Divider Bars

These very popular rigid, reusable divider bars are available in both low-density and high-density polyethylene are available in several different cross-section sizes. These divider bars can be cut or trimmed if needed. They are held in place with double-faced masking tape on flat decks and vanity top molds to form the straight boundaries of custom-sized parts. Because they are fabricated out of polyethylene, they won't stick to cast polymer parts, requiring little setup time, and even work in non-gelcoated applications. We can also custom-cut any size wished for an additional charge. Sold in 8' lengths.

Urethane End-Stop Divider Bars

These reusable dividers are indispensable for custom set-ups where cove-back or integral backsplash molds are involved. Designed to fit the contours of a specific cove-back mold, End-Stop dividers are used to establish the end boundaries for custom tops and are composed of a urethane material that provides a more finished edge on the part. When ordering, indicate the specific mold series number (straight or dripless) with which the divider will be used. Two styles are available - Reinforced (Black in color) or Unreinforced (Yellow in color). For other requirements, call for assistance.

Lavatory Bowl Setup Components

Faucet Hole Rings

Our silicone-coated Faucet Hole Rings are a real time saver for manufacturers, since they provide a fast, easy way to create 1¼" (3.2 cm) diameter faucet fixture holes in a vanity top. Faucet hole rings are positioned and set in place on the vanity mold to create holes in the finished product where the faucets will be installed, saving drilling time later. Installers need only to pop out holes prior to faucet installation. Available in five different sizes to accommodate different thicknesses of marble.

Cardboard (approx. 1,000 per box)

Order Information

- 3/8" (.95cm) - #000016C
- 1/2" (1.3cm) - #00001C
- 5/8" (1.6cm) - #00002C
- 3/4" (1.9cm) - #00003C
- 7/8" (2.2cm) - #00004C

Bowl Clips

Bowl clips are used with the floating unit assembly for firmly attaching undermount bowls to marble vanity tops. The screw of the floating unit assembly fits through the slot of the bowl clip, resulting in a firm, solid attachment of undermount bowls to cultured marble vanity tops. Packaged in quantities of 100 or 1,000.

Order Information

- 100 per Box - #000061
- 1000 per Box - #00006

Floating Unit Assembly (FUA)

Known at "T-Nuts" to many, they are placed into the ungelled matrix. When the marble cures, they provide a solid anchor for attaching undermount bowls to marble vanity tops and bases to marble table tops. The paper tab on the "T-Nut" assembly prevents it from sinking too far into the matrix and also serves as a spacer for the proper positioning of the "T-Nut" when used with speedy plugs. It also serves as a spacer for the proper positioning of the FUA when used with speedy plugs.

Order Information

Overflow System Components

Polycollars

Trimmed polycollars have the top cut off, and untrimmed polycollars are not trimmed.

Round Overflow Polycollars

The slim round polycollar used in combination with our 1/2" tubing and round stem provides an economical overflow system.

Polydomes & Assembly Components

Standard Polydomes

Polydomes define the drain outlet size and serve as a base for the polycollar. Bolt it into place and gelcoat before casting. Fits perfectly with Marshall Gruber Polycollars.

Standard Polydome - Ea - #01130

Oval Overflow Pipe

The Overflow Pipe connects directly to the oval polycollar at the drain end and to the overflow stem at the overflow outlet. In addition, it features an integral, calibrated scale that permits quick and accurate trimming to achieve a proper fit on any size and shape of bowl. Like the polycollar, the overflow pipe becomes a permanent part of the finished bowl. They are available in boxes of 100 and 500.

Order Information

Overflow Pipe Box/100 - #00026G

Overflow Pipe Box/500 - #00026-5G

Round Plastic Tubing

Flexible, pliable 1/2" clear vinyl tubing is used to provide a germ-resistant permanent bowl overflow. Fits snugly onto the round polycollar. Use with a round stem to create a clean outlet hole. Boxed plastic tubing is preferred if it is being shipped via UPS, since shipping boxed items is relatively less expensive.

Order Information

1/2" Round PVC Tubing - 100' Roll - #001010

1/2" Round PVC Tubing - 100' Roll (Boxed) - #001010B

Drain Boss - Standard

Made from aluminum, this eliminates the need for polydomes, captive nut assemblies and suction cup assemblies. Polycollar fits directly onto the drain boss for faster production. 1-9/16" standard, but custom sizes available by request. Excellent for use with modular vanities and floating bowls (when using Ex-Wax).

Order Information

1-9/16" Standard Drain Boss - Ea - #191045

Drain Boss - Hollow Core

This product utilizes the same 1-9/16" diameter Drain Boss, but with a larger 1/2" center drilled hole and a slightly larger bolt with drilled center "hollow core". The hollow core serves two functions: It allows pressure to be equalized from the mold surface to the backside of the mold. And allows the operator to blow air into the mold cavity during demolding.

Order Information

Drain Boss Captive Nut Assembly - Ea - #R-01132

Suction Cup Stem Assembly

The Suction Cup Stem Assembly is used to firmly attach the polydome, overflow components and floating bowl mold to a vanity top mold. Individual components may be ordered separately. Fits all sizes.

Order Information

11-1/2" Stem Assembly - Ea - #011271

Stem Only 3/8 x 11-1/2" 4" - Ea - #01127

Suction Cups for Stem Assembly - Ea - #01122

Wing Nut 3/8"-16 - Ea - #01123

3/8" Washer - Ea - #01123-1

Captive Nut Assembly

Because this assembly is permanently affixed to the drain end of the mold, there is no need for a stem assembly. The polydome attaches with an eye bolt for easy removal. Time and materials are saved for a more efficient production process.

Order Information

Captive Nut Assembly - Ea - #01131

Bolt only - Captive Nut Assembly - Ea - #011311

Jam Nut - Captive Nut Assembly - Ea - #0113212

Captive Nut/Flat Washer 5/16 - Lb - #0113213

Lock Washer-Captive Nut Assembly - Ea - #0113214

Reusable Stems

Oval To Round Adapter Stems

The adaptor stem allows manufacturers to connect round overflow tubing to a mold with an oval overflow hole already cut.

Adaptor Stem - Ea - #001017

Round Stems

The new round stem is angled 90° for easy insertion, so that round tubing can be attached without crimping. Creates a cleaner, more attractive outlet that is easier to finish, and eliminate the need to redrill when adding a round beauty ring.

Round Overflow Stem - Ea - #001015

Oval Stems

The oval stem was designed to fit Marshall Gruber Oval Overflow Pipe and Oval Beauty Rings. It is easily removed for reuse and eliminates costly refinishing of the overflow hole.

Oval Overflow Stem - Ea - #01124

GruberCare WetStrip™ Mold Cleaning System

Designed for: Thorough cleaning of all mold finishing compounds, including wax based release systems, and substantial removal of polymer based release systems. Excellent for surface preparation prior to application of polymer or waxed based releases.

Benefits:

- Ecological - all water based, biodegradable.
- Labor saving - cleans faster than solvent wiping.
- More effective - better porosity cleansing of polishing compounds.

Mold Sealers

GuberCare MR Sealer

GruberCare MR Sealer is designed as a mold sealer for glass reinforced polyester, vinyl ester, epoxy or metal molds. For use in combination with the MR GP and MR HI-TEC products. It should be used to prevent styrene emission or migration from new molds and eliminate surface porosity of metallic molds. The resin both seals micro porosity and fills minor scratches on the mold surface. The result is a smooth, high gloss surface primed for GruberCare top-coat application. GruberCare MR Sealer is especially recommended for use on new molds and repaired areas on older molds.

Product Benefits:

- Efficient mold sealer and primer
- Easy application
- Enhances mold gloss (see application details for appropriate coating technique)
- Low odor
- Minimal mold build-up
- Versatile, can be used on all mold surfaces
- Durable; provides semi-permanent base-coat for mold release agent top coats

Mold Release

Grubercare MR GP (General Purpose Multi-Release)

Multi-release system yielding high gloss moldings. GruberCare MR GP is designed to release gel-coated glass reinforced polyester or vinyl ester parts from gel-coated molds. Purposely formulated for reinforced polyester resins or high gloss moldings using gelcoats and increased temperature performance. GruberCare MR GP is an advanced polymeric resin in a non-chlorinated organic solvent blend. GruberCare MR GP is ideally suited for high gloss applications. The product is quick and easy to apply and produces a high gloss durable finish capable of giving many releases before reapplication is necessary.

Product Benefits:

- Easy application
- Non contaminating
- Non-chlorinated, Ecologically friendly solvents
- Low odor
- Minimal mold build-up
- Superior gloss retention
- Durable; provides multiple releases per application

GruberCare Interphase Wax

GruberCare Interphase Wax is a liquid blend of high-melting point waxes formulated as an interphase release to minimize dulling wax build-up caused by continuous use of Release Wax. When used in conjunction with GruberCare Release/Indicated Wax, time between mold strippings can be extended significantly. Use Interphase Wax approximately every 10 castings or when dulling wax build-up begins to appear on the mold surface.

Tooling Wax & Clay

Rhino Extrudable Wax

Cast polymer manufacturers have long recognized the benefits of using wax fillets in setting up molds for production. The smooth radii and ease of finishing from wax provide significant benefits to the user compared to clay. Marshall Gruber has developed an extrudable wax that combines the flexibility of clay and the quality of wax. Our wax is available in 5" x 1" sticks.

Order Information

Ex-hard 2lb box - #SP1018
Ex-hard 24lb case - #SP1019

Ex-Soft 24lb case - #SP1025

Tooling Clay

Tooling Clay is used for the same purposes as Ex-Wax and Tooling Wax - to create a smooth radius between the edge of a floating bowl mold and the surface of the vanity deck on which it is positioned. Like Ex-Wax, no special applicator tools or heat are required in its use. The clay can be extruded in the size required through the Clay/Wax Extruder. Sold in 5 lb Boxes of 20 sticks or 50 lb Cases of 10 Boxes (200 sticks). Each clay stick is 4 oz and 1" x 1" x 5"

EX-Wax

This Marshall Gruber extrudable fillet material offers the best characteristics of both fillet wax and modeling clay. EX-Wax leaves a smooth radius, doesn't contain solvents, tools easily and is extrudable. A box contains 12 sticks and weighs 2lbs. A case contains 12 boxes of 12 sticks each, or 144 total sticks.

Spray Equipment

Air Powered Gelcoat/Resin Spray Gun - with 6" Tip

Model 100-6, For all Gelcoat and Spray Granite applications.

Complete with FN6 nozzle, lid, plastic cup, nozzle brush, paper cup, cup liner, micron gauge & instructions. This professional grade sprayer is a must for every fiberglass, composite and cultured marble shop. This gun is used for spraying not only gelcoat and resins, but other materials such as parting films, spray gypsum, tooling gelcoats, sandable primers, granite enhanced gelcoats, adhesives and paints. With our largest nozzle, it will even sand blast. The easy to clean design means clean up times less than five minutes. Wipe the lid and nozzle, through away the cup, and you're ready to go again. We have also designed the gun to work with standard paper cups (Sweetheart P4325 & Solo 320).

**MARSHALL
GRUBER
COMPANY**

Introducing 5 NEW Spray Granatex Colors.

Granatex GTX 600 is better known throughout the industry as "Spray Granatex". Granatex 600 is a unique formulation used for spray manufacturing cost-efficient granite-looking products. Granatex 600 is highly suitable as an architectural surface coating.

Coswell Gold
02750023

Steel Gray*

Brownstone
02750024

Cobblestone Gray
02750025

Brownwood
02750029

Once a sufficient layer of Granatex 600 has been applied, the remainder of the part can be back filled with a low cost casting system or reinforced with fiberglass. The result is an affordable part with granite-like appearance. Superior performance and depth can be achieved when sprayed behind a clear gelcoat. It can be applied to a wide range of materials using either a dry hopper spray system or a wet spray system.

Spray methods for Granatex 600 vary depending on the type of part and production equipment available. Dry hopper systems are excellent for large production shops due to minimal down time when changing colors and reduced clean-up time. In applications where parts are intricately shaped, a wet spray system works well as it can be more closely controlled. Marshall Gruber recommends a 70/30 gelcoat to granule ratio. Designed to be user friendly, Granatex 600 uses a mix and spray concept. Using the recommended ratio of gelcoat to granules, manufacturers simply have to blend the gelcoat, granules and appropriate amount of catalyst to create a mix that is ready to spray.

Available in 40 lb or 400 lb containers and Super Sack quantities are available upon request.

Ask about custom color matching from Marshall Gruber.
